Supervisor: Prof. Rowayda Sadek

The ancient Egyptian hieroglyphs have always been a mysterious writing system as their meaning was completely lost in the 4th century AD. The discovery of the Rosetta stone in 1799 allowed researchers to investigate the hieroglyphs, but it was not until 1822 when ancient Egyptian hieroglyphs have always been a mysterious writing system as their Thomas Young and Jean-Fran,cois Champollion discovered that these hieroglyphs don't resemble a word, but each hieroglyph resembles a sound and multiple hieroglyphs form a word. Their work has had a revolutionary impact on the deciphering of ancient Egyptian hieroglyphs. The ability to understand hieroglyphs has uncovered much of the history, customs and culture of Egypt's ancient past. It is these ancient hieroglyphs that tell the tales of the otherwise long forgotten Pharaohs. Their achievements and victories on the battlefields have all been stored within these hieroglyphs. So we tried to deep understand the ancient Egyptian hieroglyphs and find a solution to make it easy to read it, by translating it into English. This system would help: - Tourists - archaeologist Keywords: Translating Hieroglyphic Language
